Responsive

To create Responsive Testing and problem write on sheet with screenshot to order the online pizza process?

First problem is no free responsive testing website.
Second the free website allowes limited time only when just we search the app like lapinoz pizza
Third when we get the page on google and open it the time is goin to over so no further test will be perform on it
When try to open lapinoz in ipad pro, ipad mini 2019, Galaxy Note 10 the webpage of lapinoz not open.

When try to open in iphone x, samsung galaxy s24 plus, samsunge galaxy s24 ultra it open.
